

Heil Bio Gas Scrubbers for removal of H₂S and related odors

Many food processors, manufacturers and related industries use Bio filtration or Bio beds to control their H₂S emissions, and in some cases produce a usable byproduct. Bio filtration is effective although, generally not highly efficient. Many of these applications require additional odor removal capability to meet emission standards and/or to respond to peak odor emissions.

The solution is an odor scrubber from Heil.

Heil Odor scrubbers can meet the most challenging odor emissions with removal efficiencies of 99% or greater if required and can be designed to meet most any odor outlet requirement.

Heil scrubbers are available for odor removal from a variety of industrial and municipal odor applications.

Contact Heil for additional information on scrubbers for H₂S and a wide variety of other contaminants and odors.
